|  |  | nd other minerals must be carried out by gemologists with many years experience in this field governing their work as well as a thorough knowledge of crystallographic, optical and physical |

phenomenon. The identification of the various species and varieties of stones, the distinction between natural and synthetic material, as well as various treatment methods currently encountered are all very sensitive factors. More specifically for diamonds, the laws of refraction and dispersion of light, the related geometric data as well as knowledge of all aspects involved in the cutting process are essential.
