The gemological analysis of diamonds, precious stones and other minerals must be carried out by gemologists with many years experience in this field									

The generological analysis of alam for as, precises alongs and on the numerical be called out by generological switch may be a set the professional code of ethics governing their work as well as a thorough knowledge of chystallographic, optical and physical phenomenon.

The identification of the various species and varieties of stones, the distinction between natural and synthetic material, as well as various treatment methods currently encountered are all very sensitive factors. More specifically for diamonds, the laws of refraction and dispersion of light, the related geometric data as well as knowledge of all aspects involved in the cutting process are essential.

This gemological report is provided upon request of the customer and/or the owner of the gem. By making this report I.G.I. does not agree to purchase or replace the article. Neither I.G.I. nor any member of its staff shall, at any time, be held responsible for any discrepancy which may result from the application of other grading methods.
